Information

Auto3P is happy to introduce to the automotive and insurance communities the Auto3P Horizon - a new online platform for all Auto3P services.

Welcome to the Beta site

Auto3P welcomes you to the [Beta site](#) of Auto3P Horizon. Here, you can explore the new developments and changes before we publish them to the Live servers.

Auto3P Package Solution - Fleets

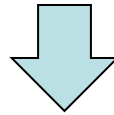

- **MultiFleet** - comprehensive fleet management solution, aids fleet managers in tracking vehicle locations by using GPS technology, optimizes vehicle and driver assignment, affords better control over fuel consumption, tire and spare parts wear and, in general, provides the best tools for supervising day-to-day vehicle movement, maintenance and repairs.
- **MultiClaim** is a reliable and comprehensive claims management application, that streamlines the claims clearing process from initial estimate in the field to claim clearing and billing control. It is a major tool for smoothing workflow between the insurance company and the repairers or part providers.
- **MultiTrader** - a smart parts acquisition solution (OE/OEM/AM/USED Parts).
- **MultiControl** - an automatic invoice check facility, has integrated tools for document management and a powerful generator for management reports.
- **Management tools** – on demand statistic reports, internal correspondence mailing, workflow and queue management.

Sector benefits

The Auto3P solution for the Fleet sector will allow you to:

- Dramatically reduce costs
- Improve the security
- Fraud detecting
- Improve the customer service
- Improve the management practice and workflows.

**Immediate saving in labor,
time and money at your business!**

Service Integration options

A - Partial integration –

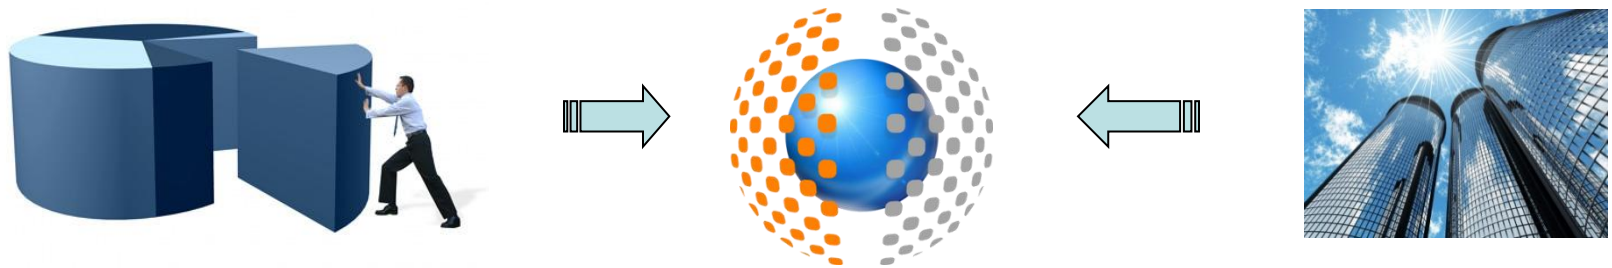

Separate systems that are integrated in several defined points where data is transferred between systems (opening or closing files).

B - Embedded integration –

The data engines of Auto3P system are embedded within the companies' ERP (with its look and fill).

C - Full integration –

Using full XML API's protocol to create and customized solution between systems.

- New file interface - open file (automatic process).
- Image export interface
- Data export interface
